## SHF 46120 A

### Optical Transmitter

## Description

The SHF 46120 A is a stand alone optical transmitter unit.

This optical transmitter converts electrical signals into optical signals at a data rate of up to 50 Gbps in ASK (amplitude shift keying) format.

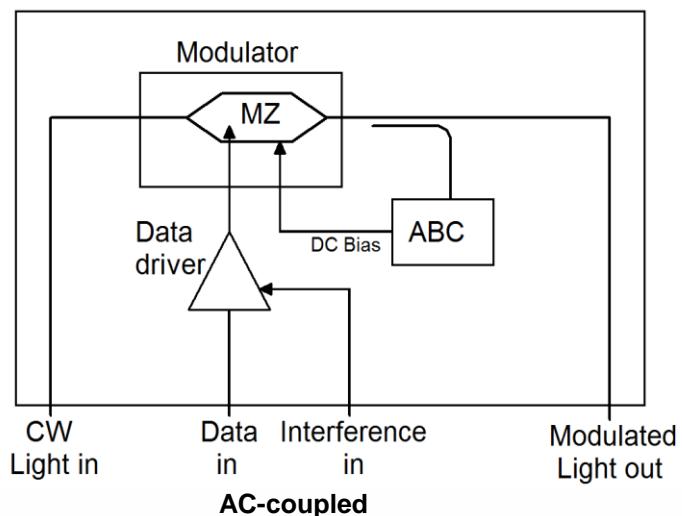

The main element of the SHF 46120 A is a thermally stable Chirp-free Lithium Niobate Mach-Zehnder modulator which is driven by an individually optimized amplifier.

The temperature stable modulator and an automatic bias circuit ensure high stability of the output signal.

## Features

- 50 Gbps optical data streams
- < 9 ps rise and fall time digital optical signals at 44 Gbps
- Modulators' bias condition controlled automatically
- SONET/SDH compatible
- Stressed eye generation for optical compliance testing
- Interference input to set the Vertical Eye Closure Penalty (VECP)

## Functional block diagram

# Specifications – SHF 46120 A

| Parameter  | Unit              | Min.        | Typ.                                | Max.    | Conditions  |

## Stressed eye generation

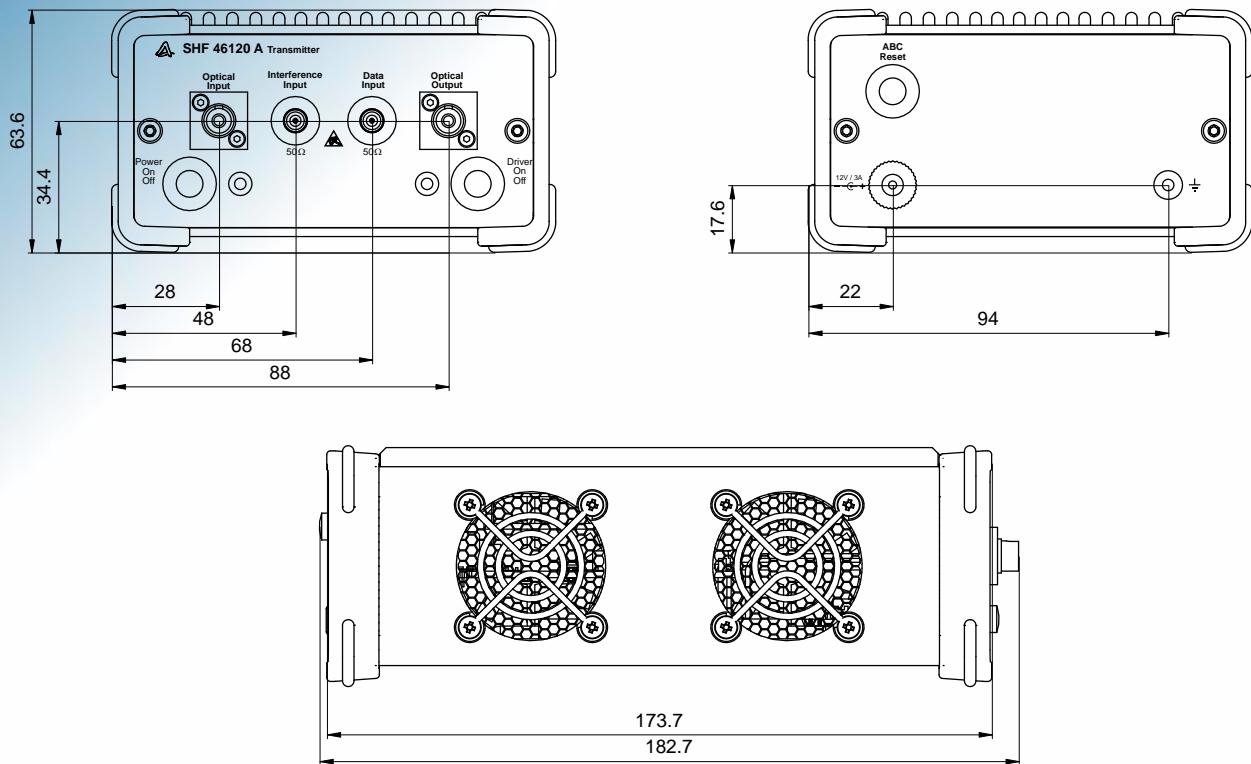

When driving the transmitter with an input signal below the compression level of ~ 500 mVpp, a stable but impaired eye diagram is generated.

Additional stress can be superposed by adding an external interference signal via a dedicated interference input.
